ABB Automation Specialist Services

ABB Control System Partners

AFRY has a very strong team with ABB Automation System competence and long experience of their control systems. We are a full-fledged ABB Control System Premium Partner, the highest level of ABBs partner program. We have certified expertise on the ABB Automation platform and a team with extensive skills in working with ABB products and systems in different projects and industries. Being a high-ranked partner with ABB also gives the benefit of receiving firsthand information.

Why AFRY?

We have the overall competence required to automate different types of industrial plants or infrastructural projects. We deliver automation projects both nationally and internationally. One of our biggest strength is that we provide deep knowledge within System 800xA and our experts are also certified in special niches of the 800xA System.

Our specialist have, among other things, competence in System Implementation, System Application, System Migration, 800xA Safety High Integrity, Cyber security and Advanced Services and Maintenance

Specialist Services

System Implementation

Implement a new 800xA system from scratch is one of our strengths at AFRY. From building the IT structure for servers and automation network to integration of the 800xA System and IT subsystem into a reliable entity with full accessibility.

System Application

With our own 800xA-library we can ensure secure and efficient solutions for our customers. Our 800xA-library is used in both small applications and big implementation projects

System Upgrade

Upgrading complex automation systems to a modern platform is everyday work for the 800xA team within AFRY. We have the tools and processes to do this in a cost-efficient way.

System Migration

AFRY have developed a system migration tool that offers a semiautomated way to migrate old ABB software into a modern 800xA installation. The tool secures a high quality result based on code evaluation and quality check along the way.

System Health Check

Our certified experts provides a system analysis consisting of a comprehensive evaluation of critical areas.

Including:

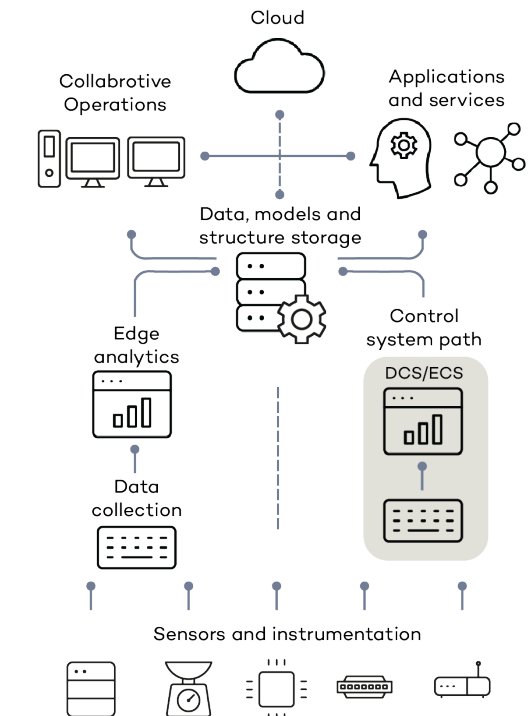

- system performance
- hardware
- software
- firmware
- system and Ethernet communications
- current maintenance practices.

As a result we can offer corrective and preventive recommendations to enhance and improve system performance and efficiency.

Welcome to Team up!

Our experts and engineers are ready to find the right solution just for you.

We are interested in taking part in deeper technical discussions, help with your 800xA system or any other ABB Automation product. You are welcome to contact us if you have any questions regarding the ABB Automation platform
