# Advanced Automation

VP and Head of Business Area Advanced Automation, Michael Mjörnestål

## It all starts with automation

*“The need for more complex automation systems is increasing, and this is the right way forward to help our clients to be more competitive. Imagine a factory with robots and machines working together. We deliver all of that. The only thing the client has to do, is to press the start button. We are now the number one engineering partner for projects and professional services in the Nordics, and we continue to grow our market shares in selected countries. We are always close to our clients and can therefore always support in the best way.”*

- Michael Mjörnestål

We have all the services needed by our clients to implement their industrial project. AFRY can provide everything from project management to service and support. In the design phase we have the mechanical and electrical engineering services needed to design a well-functioning process or production line. In the implementation phase we have the automation and robot engineers to ensure that the design is realized in an optimal way.

AFRY has successfully completed a large number of automation projects, undertaking complete turn-key automation systems, from prestudy to commissioning. We develop production lines for automotive OEMs, and their sub-suppliers, integrate machines into high qualitative advanced manufacturing operations, machine tending applications, material handling and much more.

Our experienced teams have the competence and background within project implementation, to ensure our clients a safe implementation. We have both the deep knowledge, as well as the large competence pool for the major DCS or PLC systems. Our operational Service and Support organization, available at all times, ensures a secure operation for our clients.

Our strength is that we understand the needs and challenges that industry faces in its daily operations. With our knowledge of modern technologies, we develop solutions that create the competitive future industry.
